The diagram illustrates the mapping of a physical system to a stream-based representation. It is organized into three rows, each representing a different level of detail or type of feature.

- Top Row:** A **Highway** is mapped to a **Pipe/Power Line** (represented by a line with a central dot) and a **Stream/Shortline** (represented by a wavy line).
- Middle Row:** A **Secondary Road** is mapped to a **Rigidity/Physical Feature** (represented by a line with a central dot) and an **Intermittent Stream** (represented by a dashed wavy line).
- Bottom Row:** A **Junction/Stream Confluence** is mapped to a **Property/Facets Line** (represented by a line with a central dot) and a **River/Lake** (represented by a solid wavy line).

Below these rows are three diagrams illustrating the mapping process:

- Railroad:** A diagram showing a track with a central dot and a wavy line.
- Inset:** A diagram showing a rectangular area with a dashed border, representing a zoomed-in view of a specific location.
- Out Area:** A diagram showing a rectangular area with a dashed border, representing a zoomed-out view of a specific location.

Where international, state, and/or county boundaries coincide, the map shows the boundary symbol for only the highest-ranking of these boundaries.

- ¹ A '*' following a place name indicates that the place is coterminous with a MCD. A '0' indicates that the place is also a false MCD; the false MCD name is not shown.
- ² A '*' following a block number indicates that the block number is repeated elsewhere in the block.
